The main objective of the competition is restitution of high-grade textbooks in the educational process, which have been successfully tried and tested in universities and colleges, but which, for various reasons, are also inaccessible for the academic community. Re-issue of such textbooks should support development of Russian education in top-priority majors, such as engineering, technical, educational, agricultural and medical ones.

We congratulate Professor Garshin on the well-deserved representation of SPbPU at the competition and wish him promising discoveries, innovative ideas, which will definitely help the Polytechnic University develop and become an example of professionalism and science devotion for the young generation of Polytechnicians!
