

The Polytech North Capital Motorsport team builds its fourth race car

Polytech North Capital Motorsport keeps being the first and only team in the Northwest region to take part in the International Formula Student or Formula SAE. Today the Polytechnics are building their fourth race car – the QUATTRO. The team was supported by Kawasaki, which provided a kit of spare parts needed to maintain, repair and improve the KX450 engines.

The Polytech North Capital Motorsport team [has been cooperating](#) with the Japanese corporation Kawasaki Heavy Industries for the second year already. The 2019 car took part in the competitions in Germany at the Hockenheimring, as well as in the Russian start, where it was the second in the discipline “Car construction” and the third in the discipline “Cost of the car”. Also, the race car became the fastest in the competition showing the best time in the race.

Work is currently underway on a fourth vehicle called QUATTRO. As the team members put it, despite the successful design of the third car, there is still a lot of room for improvement. This is exactly what was done when designing QUATTRO. The team has managed to integrate the modern Kawasaki engine well into the car's chassis system and this aspect will be further improved. A set of spare parts required for maintenance, repair and improvement of KX450 engines has been received.
