

## Slavic Horizon: SPbPU and KRSU join forces

On September 26, the second summit of Slavic universities «Slavic Horizon — 2024» took place at Polytechnic University, where SPbPU and KRSU signed agreements on nine network educational programs in the following areas: information technologies and communication systems, electronics and nanoelectronics, instrument engineering, electric power engineering, mechanics, architectural environment design, software engineering, construction, and technosphere safety.

This year, 30 KRSU students have already started long-term internships under this agreement. The guys shared their impressions of studying at Polytechnic.

Daniel Kutmanov, a student of the Institute of Cybersecurity and Computer Science in software engineering, is a volunteer and organizer of a youth initiative dedicated to helping children with disabilities.

We had activities where the children practiced basketball and volleyball, which helped them get away from their daily lives through sports. GPA and social achievements were taken into account in the selection process for Polytechnic. When I came to Peter, I was pleasantly surprised. It's a very beautiful city, I like

it here. I was also impressed by Polytechnic University's reputation, I am glad to be in one of the best international universities in Russia, — said Daniel Kutmanov.

Daniel's classmate Anatoly Toropov has come to St. Petersburg several times as a tourist and is now interning at Russia's leading engineering university.

All the lecturers have a unique style. Some use interactive methods, engaging students in discussions and group projects, which promotes a deeper understanding of the topic. Others prefer a traditional approach, emphasizing lectures and theoretical aspects. Their passion for the subject and desire to inspire students creates an atmosphere of trust and openness where we can freely share our thoughts and ask questions, — said Anatoly.

Baigeldi Musaev studies at the Institute of Civil Engineering of SPbPU.

Studying was stressful at first, because our knowledge is different from the level of training of polytechnics. The training programs in St. Petersburg start with what we learn only by the end of the second year. But over time we started to adapt and build up our schedule so that we could catch up with our classmates. St. Petersburg is an amazing city and our new friends give us tours. Now I feel part of this community and I am happy to have the opportunity to study here, — shared Baigheldi.
