

SPbPU is in the top 3 in four areas in the RAEX subject ranking

On May 16, RAEX agency published a series of subject rankings in which SPbPU took high positions in engineering and technical areas:

- First place in the «construction» category, scoring a maximum of 100 points
- Second place in «mechanical engineering, robotics» (96 points) and «land transport engineering and technology» (83.03 points)
- Third place in the «nuclear energy and technology» (65.46 points).

Thanks to high results in several areas, Peter the Great St. Petersburg Polytechnic University took 6th place in the medal standings. SPbPU rose in other no less significant areas — in «environmental science», «materials technology», «biotechnology and bioengineering», «electronics, radio engineering and communication systems» the university entered the TOP-5 ranking, in «mathematics» and «physics» — in the TOP-10. In total, the university is represented in 18 subject areas.

Commenting on this ranking, Rector of SPbPU, RAS Academician Andrei Rudskoi noted that Polytechnic University has always been famous for high-quality

engineering developments and education, which is reflected in the results of this ranking. Mathematics and physics are historically our strongest subjects. I am glad that we continue to successfully transform these competencies into advanced applied engineering knowledge: to provide high-quality engineering education, solving the problems of overcoming the shortage of engineering and technical personnel, and developing sophisticated solutions to ensure the technological sovereignty of the country, said the rector.
